

Sale Name: Superior Taxidermy & Artifact Auction
LOT 365 - Authentic African T-Rex Fossil Tooth

Description

This big tooth is from a Dinosaur called Carcharodontosaurus saharicus, who was slightly larger than our American T-Rex. He lived in Northwestern Africa in the mid-Jurassic Period. On a 1 to 10 quality scale, this tooth is an 8.25. It is very nice with good serrations and a good amount of enamel. It also has very nice color. But, a few serrations are missing, or have been worn down. A little bit of the enamel on both sides has eroded away. Of course this is a commonly found thing with Dino teeth. A nice tooth like this will commonly bring \$ 775.00 to \$ 550.00 at the Fossil Shows. Here is a great chance to own an ancient piece of history. By the way, these teeth only go up in value.

Quantity: 1
